LINE COUNT:	14837		

AB Microcompetition for GABP between a foreign polynucleotide and a cellular GABP regulated gene is a risk factor associated with chronic disease such as obesity, cancer, atherosclerosis, stroke, osteoarthritis, diabetes, asthma, and other autoimmune diseases. The invention uses this novel discovery to present methods for the treatment of these chronic diseases. The methods are based on modifying such microcompetition, or the effect of such microcompetition on the cell. For instance, treatment may modify the cellular copy number of the foreign polynucleotide, change the rate of complex formation between GABP and either the foreign polynucleotide or the cellular GABP regulated gene, vary the expression of the cellular GABP regulated gene, or manipulate the activity of the gene product of the cellular GABP regulated gene. The invention also presents methods for treatment of chronic diseases resulting from other foreign polynucleotide-type disruptions.

L2 ANSWER 2 OF 3 USPATFULL

ACCESSION NUMBER: 2003:99511 USPATFULL

TITLE: Drug discovery assays based on microcompetition for a limiting GABP complex
INVENTOR(S): Polansky, Hanan, Rochester, NY, UNITED STATES

	NUMBER	KIND	DATE
PATENT INFORMATION:	US 2003068616	A1	20030410
APPLICATION INFO.:	US 2002-223050	A1	20020814 (10)

LINE COUNT:	14981		

AB A recent discovery showed that microcompetition for GABP between a foreign polynucleotide and a cellular GABP regulated gene is a risk factor for some of the major chronic diseases, such as obesity, cancer, atherosclerosis, stroke, osteoarthritis, diabetes, asthma, and other autoimmune diseases. The invention uses this novel discovery to present assays for screening compounds based on their effectiveness in modulating such microcompetition, or the effects of such microcompetition on the cell. The selected compounds can be used in treatment of these chronic diseases. The invention also presents assays for screening compounds that can be used in treatment of chronic diseases resulting from other foreign polynucleotide-type disruptions.

L2 ANSWER 3 OF 3 USPATFULL

ACCESSION NUMBER: 2002:55752 USPATFULL
TITLE: Novel plants and processes for obtaining them
INVENTOR(S): Chang, Ming-Tang, Ames, IA, UNITED STATES
Keeling, Peter Lewis, Ames, IA, UNITED STATES
Hauber, Richard, Chicago, IL, UNITED STATES
Friedman, Robert, Hammond, IN, UNITED STATES
Katz, Frances, Crown Point, IN, UNITED STATES

APPLICATION INFO.:	US 2001-881735	A1	20010618 (9)
RELATED APPLN. INFO.:	Continuation of Ser. No. US 1997-765248, filed on 9 Oct 1997, UNKNOWN		
DOCUMENT TYPE:	Utility		
FILE SEGMENT:	APPLICATION		
LEGAL REPRESENTATIVE:	NIXON & VANDERHYE P.C., 1100 North Glebe Road, 8th Floor, Arlington, VA, 22201-4714		
NUMBER OF CLAIMS:	35		
EXEMPLARY CLAIM:	1		
NUMBER OF DRAWINGS:	17 Drawing Page(s)		
LINE COUNT:	1505		

AB The invention relates to a transgenic or mutated plant having genomic material which alters the normal **starch** synthesis pathway within the plant. More specifically, the present invention relates to a plant having a genotype which creates new forms of **starch** in significant quantity. Particularly, the invention relates to grain having an embryo with a genotype heterozygous for two or more

wild type genes (for example, Aa/Bb) and an endosperm having a genotype heterozygous for such genes (for example, AAa/BBb or AAa/bbB or aaA/BBb or aaA/bbB) and the starch produced therefrom.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The invention relates to novel mutant SH2 domain containing protein tyrosine phosphatases wherein the phosphatase is partially or constitutively active; and whose ability to regulate biological processes are different from the wildtype protein tyrosine phosphatases.

The invention also relates to methods of use of the novel mutants, for example, in in vitro assays to screen for binding partners and inhibitors of protein tyrosine phosphatases and in the treatment of protein tyrosine phosphatase mediated diseases or conditions.
